SAMD 4 Head Scale

INTRODUCTION AND OVERVIEW

SAMD 4 head scale

Our 4 head scale is a purpose-built machine for weighing and filling sugar in VFFS applications. It is easily retrofitted to replace existing volumetric fillers on and VFFS machine. It provides accuracy and ease of change over using recipes with no mechanical change parts. Our scale is designed and built tough to last in even harsh operating conditions. Our scale is built using full stainless steel construction with all contact parts being 316SS. Our scale is also made to be accurate achieving 0.4% of set target weight consistently. Operation is from a 7" touch screen controller for easy setting and adjustment.

Reliability & Functionality

We pride ourselves on a quality offering in our 4 head scale. With dozens in full time production, they are tried and tested. We take no short-cuts on quality and ensure each unit is manufactured to the same high standard. You can trust the SAMD scale to provide years of accurate, trouble-free production.

Our machines are locally designed and manufactured. That means they can be adjusted to suit specific applications and requirements. It also means that spares and servicing is readily available at affordable prices.
